Education

Indian Institute of Technology Roorkee

Nov 2020 – July 2024

Bachelor of Technology, Computer Science and Engineering

Skills

Languages	C++, TypeScript, JavaScript, Java
Cloud & Infrastructure	AWS — EKS, EC2, S3, EFS, MSK, CloudWatch, IAM, VPC, Cloudfront, FSx, Elasticache, Kubernetes, Docker, Helm, ArgoCD, Linux, CI/CD
Backend & Testing	Microservices, Event-Driven Architecture, Kafka, Redis, REST APIs, Node.js, Express, tRPC, MongoDB, PostgreSQL, Vitest, Jest, Playwright, GoogleTest (C++)
Areas of Interest	System Design, Distributed Systems, Data Structures & Algorithms

Work Experience

BlingIO, Bangalore

Nov 2024 – Present

Software Development Engineer — TypeScript, Node.js, Kafka, Kubernetes, AWS, MongoDB

- Architected the **Execution Planner**, the company's flagship **distributed test-orchestration service** running E2E tests in parallel at cloud scale — drove **80%+ customer adoption** and cut manual QA effort by **70%**.
- Designed **Kafka-based execution pipeline** with transactional outbox, idempotency guarantees, dynamic Kubernetes worker autoscaling, retries, and DLQ-based failure isolation to ensure reliable large-scale execution handling upto **10k+ executions per day**.
- Designed and built the **Web Recorder cloud platform** end-to-end, replacing a desktop Electron installer with a **browser-based** recorder orchestration service on **EKS** — **boosted customer onboarding success by 93%** and **cut session startup latency by 86%** via on-demand pod provisioning, **AWS FSx Lustre** image caching, transparent WebSocket proxying, heartbeat-driven session lifecycle, and stale-session reconciliation.
- Built a centralized **Kafka-to-CloudWatch observability pipeline** used by every backend microservice with schema-validated envelopes, batching, payload truncation, dead-message handling, and developed metric dashboards giving on-call production-grade visibility into worker and execution lifecycle.
- Spearheaded **schema design across all 8 services** in the BlinqV2 monorepo and built core backend systems from scratch; delivered the **full-product MVP in 2 weeks** during the v1→v2 rewrite — the architectural backbone other engineers built their components on top of, with peer PRs review and integration to ensure code quality.

Citibank, Pune

May 2023 – July 2023

Software Development Analyst Intern — React, TypeScript, Django, Python, SQL

- Built a **full-stack internal platform** (React/TypeScript, Django) aggregating large-scale market data across **distributed HPC systems** for analyst workflows.
- Automated job submission, monitoring, and result visualization, **saving 14+ engineering hours per week** for the desk team and cutting failed-job turnaround from hours to minutes.

Projects

Distributed Payments Processing System — TypeScript, Node.js, Kafka, PostgreSQL, Docker

Jan 2026

- Architected an **event-driven payments system** with **idempotent APIs**, the **transactional outbox pattern**, **Kafka-based** settlement workflows, and an **immutable financial ledger** for reliable, fault-tolerant transaction execution.
- Modeled a **state-machine-driven payment lifecycle** (created → authorized → captured → settled) enforcing strict invariants via transactional validation and **PostgreSQL row-level locking**.
- Designed end-to-end **idempotency guarantees** and **effectively-once processing** using idempotency keys, request hashing, consumer-side deduplication, and manual **Kafka** offset control over an **append-only ledger**.
- Implemented **fault-tolerant** workflows with retry-safe consumers, outbox-driven publishing, and **DLQ-based failure isolation** laying foundations for reconciliation and balance computation.

Achievements & Certifications

- LeetCode Competitive Programming** — Rating **2006 (Knight)**, **1050+** problems solved. [\[Profile\]](#) [\[Contest Ranking\]](#)
- Certifications** — **Systems Design (SystemsExpert)**: scalable architectures, distributed systems, consistency models, reliability patterns [\[link\]](#); **MongoDB Database Engineering**: schema design, indexing, performance optimization [\[link\]](#)
